

**Akili West
Consultant
Shell Diesel**

Akili West is a consultant to Shell Hydrogen heading up their public outreach and education efforts in the Washington metropolitan area. As such, West works closely with Shell's Project Driveway partner, General Motors Fuel Cell Division. Shell Hydrogen has the only integrated gasoline / hydrogen stations in the region, and GM has about 11 Chevy Equinox FCV's on the road in the DC area.

West is also a principal of Reclamation Energy LLC., a "New" energy education, project management, and technology modeling firm. As a research partner to George Mason University, we are working with undergraduate / graduate level students and professors to create innovative modalities which overcome the social and political barriers to integration faced by many emerging solar, hydrogen fuel cell and plug-in technologies.
